EDI Implementation Guide

The Workers Compensation Database

In the late 1980s and early 1990s, Montana's workers' compensation system seemed to be out of control. Premiums were rising at an alarming rate, medical costs were soaring, and the courts appeared to be changing the rules on what benefits injured workers were entitled to receive. The unfunded liability at State Fund grew from tens of millions of dollars to hundreds of millions and private insurers were leaving the Montana marketplace.

Montana needed to gain better control of a program that paid out over \$200 million in benefits. In order to increase control, Montana needed improved management information to focus and monitor reform efforts.

During the 1993 legislative session, Representative Chase Hibbard introduced legislation that created the workers' compensation database. The bill gave Montana its first opportunity to collect and analyze data pertaining to many areas of workers compensation.

The law mandated data collection from insurers, employers, medical providers, claimants, adjusters, rehabilitation providers and the legal profession. The data provides management information to the legislative and executive branches for the purpose of making policy and management decisions, including:

- performance information to identify quality and cost control issues and control abuse;
- trend information on medical, indemnity and rehabilitation costs and usage;
- litigation and attorney involved data to identify trends, problems and costs of legal involvement.

The database was designed with the input and approval of a task force comprised of adjusters, insurers, employers, legislators, State Fund, Montana Health Care Authority, the Legislative Auditor and rehabilitation providers. The task force adopted International Association of Industrial Accident Boards and Commissions (IAIABC) standards. They accepted forms-based reporting, guided rule development and approved data elements to be collected and aided in the development of both the First Report of Injury (FROI) and Subsequent Report of Injury (SROI) forms used for reporting injury and benefit information to the Department of Labor and Industry (DLI) Employment Relations Division (ERD).

Initial development of the database was completed on April 17, 1995. The database now provides information from the FROI, SROI, independent contractors, Uninsured Employer's Fund, policy coverage, attorney fee agreements, and settlements.

STATE OF MONTANA

EDI Implementation Guide

Introduction To The Electronic Data Interchange

EDI is the computer-to-computer exchange of standard business data using telecommunications. The Electronic Data Interchange (EDI) affords insurers and the Department of Labor and Industry (DLI) Employment Relations Division (ERD) a method of exchanging workers compensation information electronically. EDI is fast, accurate, reliable and cost effective. Many insurers nationwide use EDI routinely and ERD has worked hard to make this service available for Montana's workers' compensation system.

At this time, Montana DLI/ERD receives First Report of Injury (FROI) and Subsequent Report of Injury (SROI) information from insurers and DLI/ERD sends electronic acknowledgments each time data is received. Other data may be added as the national standards are developed.

Insurers who agree to send data electronically sign a trading partner agreement with DLI/ERD, which includes testing the reporting system to determine whether the transmission mechanism is acceptable. They maintain an agreed upon level of accuracy of data and re-send any data that is incorrect.

STATE OF MONTANA

EDI Implementation Guide

Getting Started

The following is a Claims Administrators Guide for how to start using EDI for reporting Montana's Workers Compensation First Reports of Injury and Subsequent Reports of Injury. The members of the IAIABC EDI Committee developed the guide for claim administrators and the Montana Department of Labor and Industry (DLI) Employment Relations Division (ERD) has modified this guide for Montana's Workers Compensation System and its needs.

The benefits to reporting EDI are:

- ❖ Reduction of paperwork
- ❖ One time data entry
- ❖ Reduced errors, improved error detection
- ❖ On-line data storage
- ❖ Faster management reporting
- ❖ Automatic reconciliation
- ❖ Reduced clerical workload and telephone calls/communication
- ❖ High productivity without increasing staff

More timely communications

- ❖ Rapid exchange of business data
- ❖ Elimination of mail charges, courier services
- ❖ Improved production cycle

Uniform communications with all trading partners

- ❖ Following a national standard
- ❖ Allows for inter-state comparison of data

Cost of using EDI

Your costs may vary depending on software, telecommunications, and IAIABC fees. (IAIABC has a copyright on the flat file format for EDI. Their steering committee, comprised of Insurers and Jurisdictions voted to allow a yearly fee to those using this format to cover the cost of maintenance of this national standard).

STATE OF MONTANA

EDI Implementation Guide

Implementing EDI

Preliminary Questions

Be prepared to answer the following types of questions, which are often asked by DLI/ERD.

- ❖ Do you report to multiple states?
- ❖ Do you perform your own claims administration or do you use a third party?
- ❖ Who currently submits FROI and SROI reports to the jurisdictions?
- ❖ Do you support denials, corrections?
- ❖ Do you currently have access to a value added network or FTP transmission?
- ❖ Do you have an in-house computer system? If not, who provides your system support?
- ❖ Are you willing to commit resources to the EDI project? If not now, when?
- ❖ Do you have the EDI facilities?
- ❖ Are you transmitting EDI for any workers compensation function?
- ❖ Do you support either ANSI X12n or Flat File format?
- ❖ What telephone communications are available?

Preparation and Business Processes

- ❖ Examine and evaluate your business processes and how EDI will affect them.
- ❖ Conduct an in-depth review of all data elements using the DLI/ERD Element Table.
 - Review the definition of each element.
 - Note the difference between these definitions and those of your firm.
 - Note those elements not statutorily valid on the Edit Matrix.
 - Note those elements not captured by your database that you wish to add as enhancements.
 - Determine if changes to hard copy forms are needed to be in alignment with the national standards.
- ❖ Identify reporting requirements for each data element.
- ❖ Conduct an in-depth review of the Maintenance Type codes (MTCs).
 - Apply the MTCs to reporting requirements.
 - Determine which MTCs are valid for DLI/ERD and which are not.
 - Once you have an understanding of the MTCs you can complete the Claim Event Table.
- ❖ Review test scenarios.
 - Determine those scenarios that are valid for DLI/ERD.
 - Determine the Data Elements and MTCs that are required for each scenario.
 - Draft hard copies of the scenarios using DLI/ERDs forms for test validation.
- ❖ Claim Administrator trading partner(s) should begin storing live claim data as soon as they are capable for later testing.
- ❖ Return to Element Requirement Table.

STATE OF MONTANA

EDI Implementation Guide

- Determine which data elements should be utilized as primary and secondary match data elements; match elements will generally be mandatory on the element requirement table.
- Complete Match Data Table.
- Review each data element by MTC, decide which elements are Mandatory (M), Conditional (C), and which are Optional (O) for each MTC.
- Complete Element Requirement Table.
- There should be no indicators for those elements that are not valid for DLI/ERD but they should remain on the table.

Return to complete the Edit Matrix Table.

- Remove other indicators for those data elements that are not statutorily valid for DLI/ERD.
- Indicate those elements that are mandatory anywhere on the Element Requirement Table.
- Review all data elements by Error Message. In other words, review all the data elements for the, 001-mandatory field not present error message, then continue through the next error messages.

It is imperative that the tables be reviewed and completed as soon as possible in the implementation process, although time consuming.

Review criteria for moving from test status to production status. Our test standard is 90% acceptance on 3 consecutive batches. Each batch must contain at least 10 unique transactions.

Technology Solutions

- ❖ Examine and evaluate hardware and software requirements and options.
 - Acquire Third Party Software to perform workers' compensation data extraction and transmission of reports over a network or
 - Develop in-house written software to perform the above or
 - Use third party services to convert your paper reports to electronically transmit the information to DLI/ERD. IAIABC can provide a list of vendors certified by the IAIABC or you can search the Internet to find vendors. Remember, not all vendors are experienced in this technology. DLI/ERD or IAIABC takes no responsibility for information found on the Internet.
- ❖ Choice of format: ANSI or Flat Format (Montana prefers using the Flat File format)
- ❖ Choice of transmission options: VAN, FTP, or Third Party Administrator.

Completion of Trading Partner Agreement

- ❖ Obtain a copy of Montana DLI/ERD Trading Partner Agreement.
- ❖ Obtain authorization from legal bureau for use of Trading Partner Agreement.
- ❖ Master Trading Partner Profile.
- ❖ Complete Transmission Specifications.
- ❖ Review Montana Report Submission Table.
- ❖ Review element requirements.
- ❖ Review MCO Tables.

STATE OF MONTANA

EDI Implementation Guide

Programming

- Develop an interface to load EDI information into your database.
- ❖ Develop edits on EDI information.
- ❖ Contact software vendors.
- ❖ Develop method of extracting the proper transactions to send per the rules and triggers in the trading partner table.

Implementation Scheduling

- ❖ Contact DLI/ERD and request EDI information such as triggers, rules, etc.
- ❖ Trading partner
 - Education
 - Begin Trading Partner Agreement
- ❖ Test status
 - Send test FROI
 - Review test data
 - Provide feedback
 - Repeat until 90% accurate
 - Send test SROI
 - Review test data
 - Provide feedback
 - Repeat until 90% accurate

Trading Partners must achieve at minimum a 90% acceptance rate on electronic reports on 3 batches containing at least 10 unique transactions.

Production status

- Receive letter from DLI/ERD granting production status.
- Discontinue sending hard copy FROIs and SROIs and begin electronic transmission on the date agreed upon.

ELECTRONIC DATA INTERCHANGE (EDI) TRADING PARTNER AGREEMENT

Objective: To initiate, implement and maintain First Reports of Injury (FROI) and Subsequent Reports (SROI) through electronic filing.

We, the undersigned, as representatives of our respective organizations, corporations or governmental entity, do hereby agree to the following:

1. The Montana Department of Labor and Industry, Employment Relations Division ("the Division") is the regulatory agency for workers' compensation and occupational disease laws in Montana. _____ is an insurer providing workers' compensation insurance in Montana or the third party administrator for an insurer. The Division, the receiver, and _____, the sender, agree that the sender will report workers' compensation information to the receiver via the national standards for Electronic Data Interchange (EDI) developed by the International Association of Industrial Accident Boards and Commission's (IAIABC) EDI Project.
2. You are a mandatory/voluntary Trading Partner. This agreement will commence upon the approval of the Division's Claims Assistance Bureau, Data Management Unit Supervisor, as demonstrated by his/her signature on this document.
3. The Trading Partners agree to use the IAIABC Flat File format.
4. The Trading Partners will perform a test of the reporting system to determine whether the transmission mechanism is acceptable. Trading Partners must meet all technical requirements as outlined in the State of Montana, EDI Implementation Guide. The term of the test is sixty days from the commencement of this agreement unless the Division approves an extension.

STATE OF MONTANA

EDI Implementation Guide

5. Once the testing requirements are met and production status granted the sender is no longer required to file paper forms.
6. Once production status is granted, the sender is required to achieve and maintain a 95% acceptance rate.
7. The format of data elements and definitions will conform to the IAIABC data dictionary, including future amendments, unless otherwise agreed between the Trading Partners. The Division will provide the sender with a minimum of thirty days notice prior to implementing amendments.
8. Technical requirements, data elements, and codes specific to Montana are found in the State of Montana EDI Implementation Guide.
9. Any error in transmission will be timely identified by the Division, and sent to the sender via the acknowledgment record. The sender will correct the identified errors and resubmit the record within 14 days of receiving the acknowledgment record.
10. The sender will pay any and all EDI transmission costs.
11. This agreement may not be modified or terminated except by the written agreement of the Trading Partners, with either party giving at least thirty days written notice to the other party.

IN WITNESS WHEREOF, the parties hereto have executed this Agreement as dated below:

0090	Payment/Adjustment Weeks Paid	<i>See below</i>	C
0091	Payment/Adjustment Days Paid	<i>See below</i>	C
0092	Benefit Adjustment Code	<i>See below</i>	C
0093	Benefit Adjustment weekly amount	<i>Conditional with 92,94</i>	C
0094	Benefit Adjustment Start Date	<i>Conditional with 92,93</i>	C
0095	Paid to Date/Reduced Earnings/Recovery Code	<i>See below</i>	C
0096	Paid to Date/Reduced Earnings/Recovery Amount	<i>See Below</i>	C
0097	Dependent/Payee Relationship	<i>Conditional with 55 & 57</i>	C

Explanation of Conditionals:

If data element 0057 has data, then 0055, 0082, and 0097 must have data and vice versa.

If data element 0071 has data, then 0072 must have data and vice versa.

If data element 0083 has data, then 0084 must have data and vice versa.

If data element 0084 has data, then 0070 must have data.

For Payment Adjustment Codes 010 (Fatality):

If a fatality has occurred due to injury/OD, report the occurrence in DN0085 as code 010.

If data element 0085 has code 010, then data element 0057 must have data.

For Payment Adjustment Codes 010 through 410:

If data element 0079 is greater than 0, then 0085 through 0089 and either 0090 or 0091 or both 0090 and 0091 must have data.

If data element 0085 has data, then data element 0079 must be greater than 0.

If any data element 0085 through 0089 has data, then all data elements 0085 through 0089 and either 0090 and 0091 or both 0090 and 0091 must have data.

For Payment Adjustment Codes 500 through 570 (Lump Sums):

If data element 0079 is greater than 0, then 0085, 0086, 0089, and 0091 must have data.

If data element 0085 has data, then data element 0079 must be greater than 0.

If any data element 0085 through 0091 has data, then data elements 0085, 0086, 0089, and 0091 must have data.

If data element 0080 is greater than 0, then 0092 through 0094 must have data.

If data element 0092 has data, then 0080 must be greater than 0.

If any data element 0092 through 0094 has data, then 0092 through 0094 must have data.

If data element 0081 is greater than 0, then 0095, 0096 must have data.

If data element 0095 has data, then 0081 must be greater than 0.

If data element 0095 has data, then 0096 must have data and vice versa.

Explanations of Mandatory Field Data Element 02:

If data element 0002 is SA, then 0073 must be either O (open) , R (reopen). X (reopen/close), or C (closed) depending on the status of the claim.

If data element 0002 is FN, then 0073 must be X (reopen/close) or C (closed).

DLI/ERD requires trading partners to send a SROI every 6 months from the anniversary of the date of injury until closure of the claim. Please see the "Montana Report Submission Table" for specific reporting submission requirements.

Compensation Payment Codes (DN85)

010 - Fatality	Benefits Paid To Families
020 - PTD	Permanent Total
021 - PTD, Supplemental	Cost of Living Adjustments
030 - PPD, Scheduled	Permanent Partial Benefits (Pre 7-1-87 Date Of Injury)
040 - PPD, Unscheduled	Permanent Partial Benefits
050 - TTD	Temporary Total Benefits
070 - TPD	Temporary Partial Benefits
090 - PPD, Disfigurement	Permanent Partial Benefits paid for disfigurement
240 - Employer Paid	Salary Paid By The Employer In Lieu Of Compensation
410 - Vocational Rehabilitation Maintenance	Retraining, Total & Partial Rehab Benefits, Auxiliary Benefits
500 - Lump Sum Other	Not Otherwise Classified or Combination of Benefits.
501 - Medical Lump Sum	Paid To Claimant As A Settlement Of Medical Liability
510 - Lump Sum Fatality	
520 - Lump Sum PTD	
530 - Lump Sum PPD, Scheduled (Pre 7-1-87 Date Of Injury)	
540 - Lump Sum PPD, Unscheduled	
541 - Lump Sum Vocational Rehabilitation Maintenance	
550 - Lump Sum TTD	
570 - Lump Sum TPD	

Late (payment to claimant) Reason Codes (DN77)

C1 - Lack of coverage information	E4 - Errors from state
D1 - Dispute concerning coverage	E5 - Errors from health care provider
D2 - Dispute concerning compensability in whole	E6 - Errors from other claim administrator/TPA
D3 - Dispute concerning compensability in part	L1 - No excuses
D4 - Dispute concerning disability in whole	L2 - Late notification, employer
D5 - Dispute concerning disability in part	L3 - Late notification, employee
D6 - Dispute concerning impairment	L4 - Late notification, state
E1 - Wrongful determination of no coverage	L5 - Late notification, health care provider
E2 - Errors from employer	L8 - Tech processing delay/computer failure
E3 - Errors from employee	L9 - Manual processing delay

Maintenance Type Codes (DN2)

SA - Semi Annual (Claim Status Open, Reopen/Closed, or Closed)
FN - Final (Claim Status Reopen/ Closed or Closed)
UR - Upon Request

Claim Type (DN74)

I - Indemnity	Z - Occupational Disease
---------------	--------------------------

Recoveries Codes (DN95) Other Benefits/Reduced Earnings Codes

300 - Funeral Expenses Paid To Date	380 - Vocational Rehabilitation evaluation paid to date
330 - Employer's Legal Expenses Paid To Date	390 - Vocational Rehabilitation education paid to date
350 - Total Payments To Physicians Paid To Date (Including Reimbursement To Claimant)	400 - Other vocational rehabilitation paid to date
	420 - Consultant/expert witness fees paid to date by insurer
360 - Hospital Costs Paid To Date (Including Reimbursement To Claimant)	810 - Employer's deductibles recovery
370 - Other Medical to Medical Provider Paid to (Date Includes Reimbursement to Claimant)	820 - Subrogation recovery
	830 - Overpayment recovery
	840 - Unspecified recovery

STATE OF MONTANA

EDI Implementation Guide

Employment Relations Division (ERD) EDI Test Policy

Getting Started

Businesses interested in becoming EDI Trading Partners with DLI/ERD may submit a completed Trading Partner Package at least 10 days prior to their first transmission of a test file. The Trading Partner Package consists of a Trading Partner Profile, Transmission Profile – Senders Response, the carrier Federal Employer Identification Number (FEIN) and a signed Trading Partner Agreement.

To schedule your EDI test, contact: Lucy Jeffrey, Section Supervisor, Montana Department of Labor and Industry, Employment Relations Division, Data Management Unit, P. O. Box 8011, Helena, Montana 59604-8011, phone (406) 444-1606, fax (406) 444-4140, e-mail: ljeffrey@mt.gov.

EDI Testing Process

This is the initial phase in which the trading partner sends 3 batches identified by a "T" in test/production indicator, to be analyzed for quality of mandatory and conditional elements. Submission of one (1) report to test transmission is allowed at the sender's discretion if the trading partner is new and not changing VANS.

The Trading Partner performs a test of the reporting system to determine whether the transmission mechanism is acceptable. Trading Partners must achieve a 90% acceptance rate on 3 consecutive batches of electronic reports (currently FROI and SROI) containing at least 10 unique transactions; submit 10 matching paper forms; and meet all technical requirements. The term of the test is sixty days unless the Division (ERD) approves an extension.

Records with the "T" indicator will only be loaded in our test database. Only records with the "P" indicator are loaded in the production database. If any current records were submitted during the test process, they must be resubmitted after production status is achieved, to be loaded in our database.

Production Status

DLI/ERD grants production status by e-mailed notice and provides the date the trading partner may start to submit reports electronically. Records with the "P" indicator are loaded in the production database.

Limits

The testing period is 60 days for each trading partner unless an extension is approved by DLI/ERD.

Selecting a Transmission Type

VAN – Value Added Network

Choosing a VAN as your data transmission selection has the following requirements:

1. Select one of the following VANs for your transmission:
Advantis – IVANS, Celerity – AT&T Easylink, Claimport, Workcomp.net, Health Tech or Direct Reporting FTP
2. Follow the VAN's procedures and provide DLI/ERD with account information in the Trading Partner Agreement.
3. Follow the EDI Testing Process outlined in this guide.

FTP – File Transfer Protocol

There are two FTP options when transmitting EDI with DLI/ERD:

1. You can access the DLI/ERD FTP server, placing your batch file in your account folder and picking up your acknowledgements.
2. DLI/ERD can access your FTP server and retrieve batch files and send acknowledgements.

Choosing FTP as your data transmission selection has the following requirements:

1. Use of FTP software compatible with DLI/ERD's use of IP Switch WS_FTP Server/Client.
 - a. Have digital signature capabilities.
 - b. Capable of 128-Bit Secure Sockets Layer (SSL) Encryption
2. One user account per Trading Partner will be setup on one FTP server, either DLI/ERD or Trading Partner's, with:
 - a. Username having 6 characters.
 - b. Password having a minimum of 6 characters using a combination of letters and numbers.
3. URL's will be used to connect to FTP sites:
 - a. DLI/ERD's URL: sample "EDI.FTP.STATE.MT.US" (must have account to access).
 - b. Trading Partner URL: sample "ACME-FTP.com".
4. Anti-virus software must be in place on an FTP server and the PC using an FTP client. DAT files are to be kept current, at minimum, 14 days after released.
5. Daily business process will be as follows:
 - a. FTP server accessibility
 - i. DLI/ERD's FTP server will be accessible 24 hours a day/7 days a week with the exception of maintenance and unforeseeable events.
 - ii. The Trading Partner's FTP server will be accessible from 8:00 a.m. to 5:00 p.m. MST Monday through Friday.

STATE OF MONTANA

EDI Implementation Guide

- iii. The following electronic folder/directory structure will be created on DLI/ERD's or Trading Partner's FTP server.

- b. Trading Partner batch file(s) must be placed on the server in the Data folder no later than 8:00 a.m. MST for same day processing by DLI/ERD.
 - c. DLI/ERD will retrieve the batch file.
 - d. DLI/ERD will copy retrieved batch file(s) to the Trading Partner's Archive folder.
 - e. DLI/ERD will place an Acknowledgement (AK1) file in the Trading Partner's AK1 folder for the previous day's batch file by 5:00 p.m. MST.
 - f. Trading Partners will retrieve their Acknowledgement (AK1) from their AK1 folder, then if desired, delete or move the file to the Archive folder.
5. Batch Files (148/A49): The DLI/ERD standard for file-naming format of batch files sent to DLI/ERD. File names will be structured as follows:

Example:

ACME0120021025081030F.148

a b c d e

- a. UserID: As assigned by DLI/ERD, usually the first 4 letters of the name and a 2 digit identifier.
- b. Date: Formatted as "CCYYMMDD".
- c. Time: Military time formatted as "HHMMSS".
- d. File Format Type: F = FLAT or A= ANSI (ANSI will no longer be accepted in Montana after 12/31/2005).
- e. Extension: 148 = FROI, A49 = SROI (extensions may be added as required).

STATE OF MONTANA

EDI Implementation Guide

6. Acknowledgement (AK1): The DLI/ERD standard for file naming format of Acknowledgements sent to the Trading Partner. File names will be structured as follows:

Example:

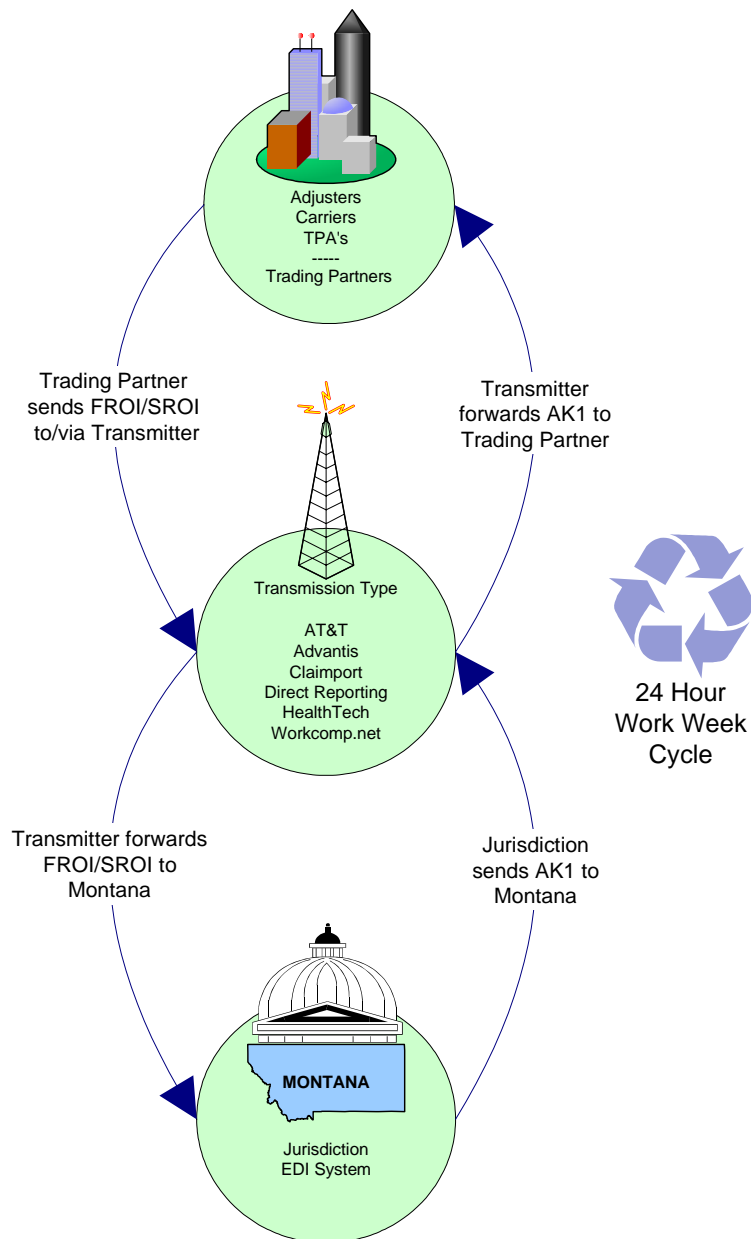

- a. User ID: As assigned by DLI/ERD, usually the first 4 letters of the name and a 2 digit identifier.
 - b. Date: Formatted as "CCYYMMDD".
 - c. Time: Military time formatted as "HHMMSS".
 - f. File Format Type: F = FLAT or A= ANSI (ANSI will no longer be accepted in Montana after 12/31/2005).
 - d. Extension: AK1 = Acknowledgement.
7. Compression of files is not permitted (e.g. zip).
 8. The Trading Partner must maintain own archival backup of batch files independent of DLI/ERD in the event of a system failure.
 9. Purging AK1 and Archive folders. If desired, the Trading Partner may archive their AK1 file on DLI/ERD's FTP server by moving it to the Archive folder after retrieval. DLI/ERD will clean the Trading Partner's AK1 and Archive folders, allowing no more than 30-days of files to accumulate.
 10. Follow the set-up and testing procedures for FTP. Work with DLI/ERD contact(s) to establish connectivity/functionality testing.
 11. Follow the EDI Testing Process outlined in this guide.

EDI Implementation Guide

Glossary

ANSI

An acronym for the American National Standards Institute. Founded in 1918, ANSI is a voluntary organization composed of over 1,300 members (including all the large computer companies) that creates standards for the computer industry. In addition to programming languages, ANSI sets standards for a wide range of technical areas, from electrical specifications to communications protocols.

Archive

To copy files ('*.148' and '*.A49') to a short-term storage folder. Periodically, the computer operator will purge or delete archive files from the archive folder.

Authorization Process

The initial step in becoming a trading partner with the Jurisdiction by completing the trading partner agreement.

Batch

A set of records that contains one Header, one or more detail transactions and one trailer record.

Batch File

A file that contains a sequence, or batch, of commands. Batch files are useful for storing sets of commands that are always executed together because you can simply enter the name of the batch file instead of entering each command individually. In DOS systems, batch files end with a.BAT extension.

Closed Claim

A claim in which all medical and indemnity benefits have been paid and there is no expectation of future liability.

Compression

Data compression is particularly useful in communications because it enables devices to transmit the same amount of data in fewer bits. There are a variety of data compression techniques, but only a few have been standardized. There are file compression formats, such as ARC and ZIP.

Data Base System

The electronic repository for workers compensation data established by 39-71-225, MCA

Digital signature

A digital code that can be attached to an electronically transmitted message that uniquely identifies the sender. Like a written signature, the purpose of a digital signature is to guarantee that the individual sending the message really is who he or she claims to be. Digital signatures are especially important for electronic commerce and are a key component of most authentication schemes. To be effective, digital signatures must be

STATE OF MONTANA

EDI Implementation Guide

unforgeable. There are a number of different encryption techniques to guarantee this level of security.

Edited data

A transaction after it goes through automated edits.

Electronic Data Interchange (EDI)

The intercompany exchange of standard business documents in a machine readable and standardized form.

Encryption

Translation of data into a secret code, encryption is the most effective way to achieve data security. To read an encrypted file, you must have access to a secret key or password that enables you to decrypt it. Unencrypted data is called plain text; encrypted data is referred to as cipher text.

Extension

In some operating systems, one or several letters at the end of a filename. Filename extensions usually follow a period (dot) and indicate the type of information stored in the file. For example, in the filename EDIT.COM, the extension is COM, which indicates that the file is a command file.

Filename

All files have names. Different operating systems impose different restrictions on filenames. Most operating systems, for example, prohibit the use of certain characters in a filename and impose a limit on the length of a filename. The filename extension usually indicates what type of file it is.

Flat file

A file that has no structured interrelationship between its data records. A text document without formatting structure is considered a flat file. The flat file only contains the lines of text without regard to the visual presentation of the data on the page.

IAIABC

The International Association of Industrial Accident Boards and Commissions, which is an international trade association that seeks to advance the administration of workers' compensation systems through education, research, and information sharing. The IAIABC establishes standards for reporting industrial accidents.

Indemnity Benefits

Any payment made directly to the worker (or the worker's beneficiaries), other than a medical benefit. The term includes payments made pursuant to a reservation of rights, or in settlement of a dispute over initial compensability of the claim. The term does not include expense reimbursements for items such as meals, travel or lodging.

Indemnity Claim

A workers' compensation or occupational disease claim where indemnity benefits in addition to medical benefits are being paid or are likely to be paid in the future.

STATE OF MONTANA

EDI Implementation Guide

MTC

A Maintenance Type Code defines the specific purpose of individual records.

Plan 1 or Plan 1 Self-Insurer

an employer that has been properly bound by the provisions of Title 39, chapter 71, part 21, MCA.

Plan 2 or Plan 2 Private Insurer

An insurer that provides workers' compensation insurance pursuant to the provisions of Title 39, chapter 71, part 22, MCA.

Plan 3 or State Fund

The state compensation insurance fund, established by Title 39, chapter 71, part 23, MCA.

Purge

Systematically and permanently remove old and unneeded data.

Raw Data

A transaction as it was received from a sender, before it goes through automated edits.

Reporting Parties

Any person, firm, corporation, or any other type of entity, including an insurer, that is required by rule to report information to the department.

Server

A computer or device on a network that manages network resources. For example, a file server is a computer and storage device dedicated to storing files. Any user on the network can store files on the server. A print server is a computer that manages one or more printers, and a network server is a computer that manages network traffic. A database server is a computer system that processes database queries. Servers are often dedicated, meaning that they perform no other tasks besides their server tasks. On multiprocessing operating systems, however, a single computer can execute several programs at once. A server in this case could refer to the program that is managing resources rather than the entire computer.

SSL

Short for Secure Sockets Layer, a protocol developed by Netscape for transmitting private documents via the Internet. SSL works by using a private key to encrypt data that's transferred over the SSL connection. Both Netscape Navigator and Internet Explorer support SSL, and many Web sites use the protocol to obtain confidential user information, such as credit card numbers. By convention, URLs that require an SSL connection start with https: instead of http:.

Another protocol for transmitting data securely over the World Wide Web is Secure HTTP (S-HTTP). Whereas SSL creates a secure connection between a client and a server, over which any amount of data can be sent securely, S-HTTP is designed to transmit individual messages securely. SSL and S-HTTP, therefore, can be seen as

STATE OF MONTANA

EDI Implementation Guide

complementary rather than competing technologies. Both protocols have been approved by the Internet Engineering Task Force (IETF) as a standard.

Tables

Tools provided in the implementation guide to communicate reporting requirements.

Third-Party Administrator (TPA)

An entity who contracts to administer all or part of an insurer's or employer's workers' compensation business, which can include adjusting a claim on behalf of the insurer or employer.

Trading Partner (TP) / Sender

A business entity that has established a relationship with the Jurisdiction to electronically report claim data. This entity may be an insurance carrier (Insurer), self-insured, third party administrator (TPA) or servicing agent/vendor.

Trading Partner tables

A set of tables designed to provide information integral to controlling the extraction and transmission processes for successful EDI of Workers' Compensation data. The data contained in these tables is originally established by the "primary" trading partner to reflect their reporting requirements and environment.

Transaction

One detail record which contains data elements as defined in the IAIABC record layout. Each field in a transaction is validated.

Transaction Type

Identifies the data contained within a record: First Report of Injury (FROI) or Subsequent Report of Injury (SROI). Data elements contained within a Transaction Type may be Mandatory, Conditional, or Optional.

UEF

The uninsured employers' fund, established by 39-71-503, MCA.

URL

Uniform Resource Locator. An Internet address which tells a browser where to find an Internet resource. For example, the URL for the Ipswitch Web site is <http://www.ipswitch.com/>.

Workers' Compensation Subsequent Report

A report required to communicate payment information related to an indemnity claim, including both medical and indemnity benefits.
